

NNCI—Nanoscale Science and Engineering Exploring Consumer Products

Explore!

1. Displayed here are several products that have been developed using nanotechnology. These are available to consumers.
2. Each product comes with an information sheet which explains the product and what is “nano” about it.
3. The host will explain what each product is and its nano connection or you can read it yourself.
4. Can you think of other applications for the technology used with each product?

Consumer Products and Nanotechnology

Nanotechnology is predicted to be a \$2.5 trillion industry by the year 2020. There are over 1,000 consumer products on the market today. If you would like to learn more about nanotechnology-enhanced products, visit the *Project on Emerging Technologies* consumer product inventory - <http://www.nanotechproject.org/inventories/>.
